# Maximize Your Business Success in the High-Growth Managed Detection and Response Market

Partner with Progress to Grow Your Business with Managed Detection and Response

___

DATA SHEET

In today's rapidly evolving cybersecurity landscape, network detection and response (NDR) technology is a cornerstone of modern security stacks. NDR is also being used alongside endpoint detection and response (EDR) and security information and event management (SIEM) technology. However, despite its pivotal role, many organizations cannot deploy and maintain their own NDR tools due to a lack of capacity, skilled personnel or budgetary restrictions. NDR represents one of the fastest-growing markets with an almost 20% Compound Annual Growth Rate (CAGR), and there is a high demand for customer adoption.

## Introducing AI-Powered Network Detection and Response

Use AI-driven threat detection and anomaly identification to enhance your cybersecurity posture and safeguard customer networks. With Progress® Flowmon® you can work in a more resilient digital environment, increasing the speed and efficiency of your threat responses.

- Fill visibility gaps and improve their security posture through NDR
- Minimize breach impact by locating early-stage attacks with robust AI-based detection algorithms
- Break down silos between IT departments through advanced threat detection workflows for proactive identification and mitigation
- Empower users at any skill level with AI-powered analytics
- Automate manual tasks to focus on higher-level priorities
- Use customizable dashboards and receive instant alerts and reports

## Reliable Security with Quick Integration

Flowmon is a powerful and scalable platform offering extensive API support as well as broad integration capabilities, such as syslog and custom scripts.

**With Flowmon you can:**

- Integrate it easily with your existing security solutions
- Validate interoperability for clients
- Reduce disruption typically associated with replacing current security technology
- Accelerate time to value

## Why Choose Flowmon?

- Trusted network detection technology used in a variety of industries
- Low deployment friction with competitively lower system complexity
- Proven market leading system scalability allows you to grow your business with your customers
- 100% MSP-ready product with white labeling and multitenancy features
- Attentive support provides a better experience and maximizes your investment
- Flexible pricing models and a low entry cost

## Elevate Your Security Offering with a Recognized Market Leader

**Gartner.**   **EMA**   **FORRESTER**   **Quadrant** Knowledge Solutions

## How to Boost Your Services with Network Threat Detection

- Develop a compelling MSSP offering with AI-powered threat detection and response
- Gain event logs for SIEM or complement your EDR offering
- Streamline your SOC services with threat-hunting analysis and workflows
- Gain deeper visibility of your IT assets and increase cloud security
- Help meet compliance and regulation requirements

**Minimize Breach Impact**   **Respond to Incidents Confidently**   **Bridge Endpoint and Perimeter Gap**

## Integrate into Existing Security Stack
